

Associated Ophthalmologists ReSTOR & Toric Testimonials

Several of my patients have chosen to upgrade to lifestyle intraocular lenses like the Aspheric ReSTOR® and AcrySof Toric® for their cataract implants. Here are a few of our favorite recent stories...Ask us about these sight changing and life enhancing opportunities when you come in for your cataract evaluation!

- Dr. S. Ejaz Husain

ReSTOR Patient

Connie: "My results could not be better and my vision has been restored to a time I can't even remember! I am able to read and work on the computer all without glasses. It truly seems miraculous. With your skills and the ReSTOR lens, I tell people they should be looking forward to cataract surgery!"

ReSTOR Patient:

Kathy: "Not a day goes by that I don't stop at some point and think, "I can see clearly without glasses or contacts"! It is amazing. Fortunately for me and others like me, there is wonderful technology, ReSTOR, and an outstanding surgeon: Dr. Ejaz Husain. This amazing procedure has allowed me to see again (without glasses!). Here are a few examples: threading a needle; putting on my makeup; driving; reading and many more. I am very grateful!"

Toric Patients:

John/Ann: "We both have had astigmatism (distortion due to corneal shape) since we could remember and had to wear contacts lenses or glasses that would correct for that. When we were told that it could be permanently corrected with an implant at the time of surgery, we jumped at the chance! After John went first and loved it, I was right behind him to schedule surgery. Now

we wear glasses only for things up close and simply use our drugstore readers for those moments. I would recommend it highly!"

How important is the opportunity to do most of your activities that you enjoy with a reduced need for glasses after cataract surgery? Would you benefit from these advanced technology lifestyle lenses? Please ask us about these options so we can truly enhance your vision and quality of your lifestyle!
